BBDITM

DEPARTMENT
OF C.S.E.

- With the passage of time and expansion, the department has succeeded in carving out a place of distinction not just inside the institution, but also among its peers across the country.

- It has attracted bright students from all over the country for quality education in computer science and engineering. The department provides a vibrant educational environment.

- Students studying computer science at the BBDITM are in great demand in the software sector.

- Our alumni work in key national and worldwide software firms like as IBM, TCS, Oracle, Microsoft, Convergeis, Birlasoft, and others.

VISION OF DEPARTMENT

"To produce globally competent professionals having social values and commitment to serve the global needs with the ability to work in an interdisciplinary environment."

MISSION OF DEPARTMENT

- To impart quality education to the students to enhance their ethical, professional and leadership qualities to make them globally competitive.
- To create a conducive environment in which students can explore computational problems and analyze them to identify the optimal solutions.
- To strive for continual enhancement of technical knowledge & innovation through industry interface to accomplish global needs.

VISION OF INSTITUTE

"To become a leading institute of providing professionally competent and socially responsive technocrats with high moral values."

MISSION OF INSTITUE

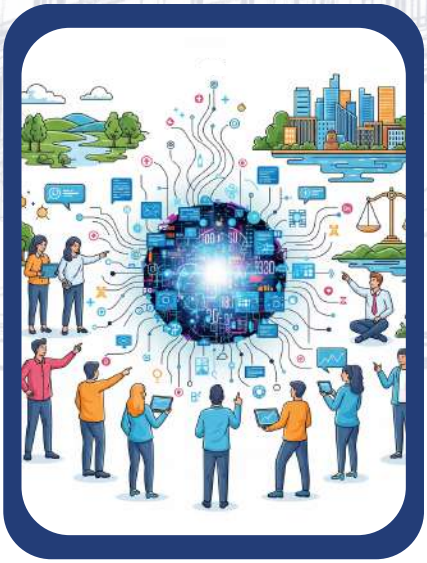

- **To create an eco-system for the dissemination of technical knowledge, to achieve academic excellence.**
- **To develop technocrats with creative skills and leadership qualities, to solve local and global challenges.**
- **To impart human values and ethics in students, to make them socially and ecofriendly responsible.**

BBDITM

PROGRAM SPECIFIC OUTCOMES (PSOs)

- **Able to design and implement the data structures and algorithms to deliver quality software products.**
- **Able to apply Artificial Intelligence and Machine Learning to solve society - related needs.**

PROGRAM EDUCATIONAL OUTCOMES (PEOs)

- **PEO-1: Problem-Solving and Analytical Thinking:** To apply computing principles to analyze complex problems, design effective solutions, and implement them to meet global standards.
- **PEO-2: Global Competitiveness and Technology Advancement:** To develop cutting-edge technology-driven projects that address global needs, foster a culture of continual enhancement and drive innovative solutions.
- **PEO-3: Sustainable Leadership and Responsible Innovation:** To demonstrate effective leadership, collaboration, and a deep understanding of the societal implications of technology, leading to responsible and sustainable outcomes.

CHERISHING FOUNDERS

CHERISHING FOUNDER

Late Babu Banarasi Das Ji

EX CHIEF MINISTER GOVT. UTTAR PRADESH

"To provide an open opportunity to the young generation for evolving their core competencies and to build their career as world class professionals with broad based foundation, in-depth knowledge & versatile personality to meet the challenges of Global Economy..."

– Babuji's Vision
(1912 – 1985)

AI Ethics: Bridging Innovation with Morality

Saroj Singh[1], Priyanka Gupta[2], Amit Kumar Sachan[3], and Sonam Singh[4]

[1, 2] Assistant Professor, Department of Computer Science & Engineering, Babu Banarasi Das Engineering College, Lucknow
[3]Assistant Professor, Department of Computer Science & Engineering, Babu Banarasi Das Institute of Technology and Management, Lucknow
[4]Assistant Professor, Department of Computer Science & Engineering, Babu Banarasi Das University, Lucknow

Abstract: With advancements in face recognition, self-driving cars, and medical diagnostics, artificial intelligence (AI) is having an increasing impact on people and society. AI has the amazing potential to significantly improve human wellbeing and advance both socially and economically. However, because to obstacles such limited viability, data biases, data security, and some privacy concerns, AI also presents significant risks. To reduce hazards, users and developers need to be aware of these drawbacks and take appropriate action. To anticipate and lessen negative effects, it is essential to identify possible areas of danger across the AI life cycle. Even though "machine ethics" research started in 2006, AI ethics is still a relatively new area of study within ethics more broadly. Establishing appropriate ethical principles, norms, standards, rules, and regulations requires an understanding of AI ethics and how to develop ethical AI. AI that is ethical acts and behaves in a morally upright way.

There are many different perspectives on AI, and in order to properly identify AI, developers, scholars, business leaders, legislators, and the general public must all contribute. This paper examines ethical difficulties and prejudices in AI, emphasizing injustice and bias as pressing problems from a sociotechnical standpoint. Uncertain standards and a lack of ethical expertise are the primary barriers in AI ethics.

Keywords: AI ethics, Bias, Data Security, Sociology, Robo ethics.

1. INTRODUCTION

AI is not a new field; rather, it is just coming out of one of its many "winters" and is starting a new "spring" [1,2]. AI's development is transforming society in ways that were unthinkable just a few years ago. Even though AI has been around for a while, its pervasiveness in our daily lives is frequently invisible. Whether it's for reading emails, conducting Google searches, recommending movies and music, or even providing driving directions, artificial intelligence has become a vital part of our lives. The COVID-19 epidemic has increased demand for AI's help and highlighted our reliance on it. AI is becoming more and more common in a number of sectors, including communications, education, healthcare, transportation, and agriculture. It is necessary to regularly interact with AI-powered applications in order to survive in the current world. [3, 4].

A viewpoint on the early machine age was offered by considering technology as a tool. However, advancements driven by AI are altering how people interact and exist in the current second age of machines. Governments, corporations, and other organisations frequently utilise AI-based algorithms to make decisions that have a big influence on people and society. Everyone, everywhere, and at any time could be impacted by their choices. They might provide answers to issues that come up in a range of occupations or in daily life, but they might also carry risks, including being turned down for a job or medical care. The discriminatory effect that AI-based decision-making has on some demographic groups has been shown by prior incidents. The company's ad engine, which has been shown to show far fewer high-paying job ads for women than for males, is one instance of gender bias in Google's targeted advertising [5]. These incidents have increased public anxiety about the potential effects of AI on our day-to-day lives.

Since it is normal for most people to be ignorant of the experiences of other groups, prejudice is not a new occurrence. Instead, it dates back to the earliest days of human civilisation [6]. However, AI-based decision-making has the potential to establish completely new categories, norms, and biases of a completely different kind, which could reinforce pre-existing biases. These ever-growing worries have prompted a reassessment of AI-based systems in favour of new approaches that also consider how equitable their judgements are.

Many academics and industry professionals believe that since AI is still far from being on par with humans, there is no urgent need to think about ethical issues. However, when paired with other intelligent technologies like robotics, AI has already shown promise in a variety of industries, including business, healthcare, and transportation. Applications such as autonomous cars bring up significant ethical issues, and AI is already having an impact on civilisation and society. Autonomous vehicles, for example, have the potential to eliminate a wide range of jobs, which would significantly impact related businesses like transportation. For instance, allowing

Abstract -The accelerated pace of digital transformation has heightened the requirement for efficient, scalable, and reliable software delivery practices. Legacy software development and deployment pipelines are typically inefficient owing to manual interventions, siloed teams, and constraints in scalability. This research presents a comprehensive DevOps Capstone Project that takes aim at conceptualizing and executing an enterprise-scale Continuous Integration and Continuous Deployment (CI/CD) pipeline. By utilizing Docker, Kubernetes, Terraform, and other automated tools, the project addresses significant software delivery concerns such as speed, quality, and operational efficiency. The findings demonstrate how a consolidated DevOps pipeline can enable agile development, reduce time-to-market, and improve overall software quality, thereby positioning organizations for long-term digital success

Key Words: DevOps, CI/CD Pipeline, Automation, Containerization, Infrastructure as Code

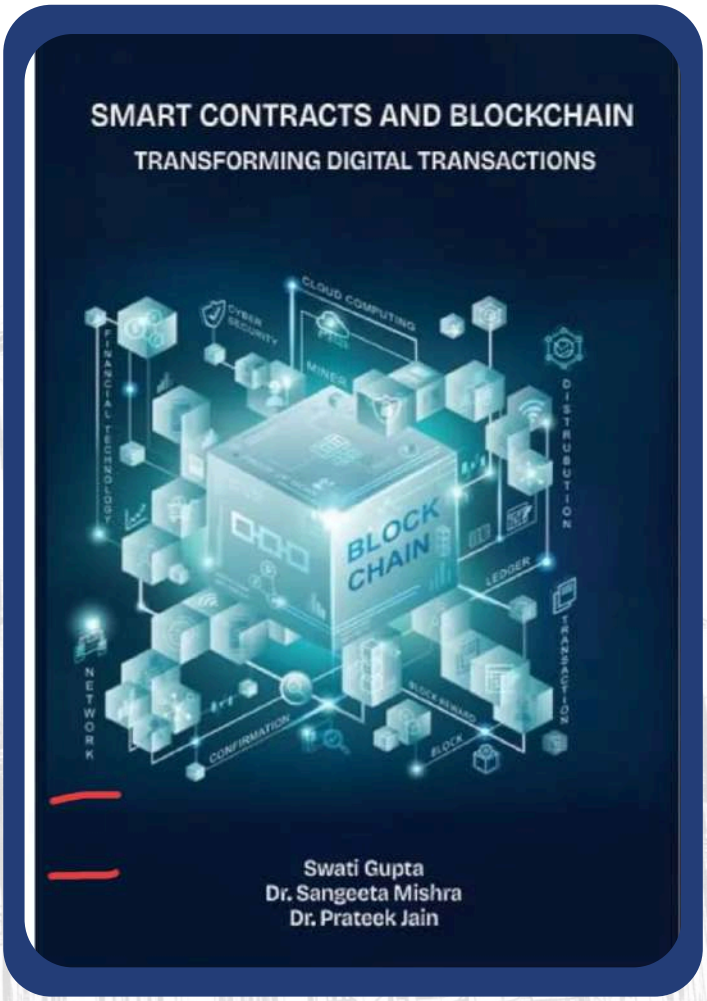

1.INTRODUCTION

As companies utilize increasingly digital solutions to remain competitive, there has never been more of a need for faster and more stable software delivery. With so much speed in the environment, creating, testing, and deploying software quickly enough is the primary difference between marketplace success and failure. Yet, conventional software deployment cannot always accommodate these needs because it is afflicted with many inherent disadvantages. Manual intervention at various stages, poor coordination between dev and operations teams, and lack of scalability become key concerns in such an approach. These issues are inclined to postpone release schedules other th an jeopardizing the system in rendering suboptimal performance while reducing the end-user satisfaction and making business results worse. There arises DevOps as a facilitator of cultural change and technical paradigm to overcome all these challenges with automated, collaborative, and continuous improvement. The core of DevOps is the Continuous Integration and Continuous Deployment pipeline, which is the foundation that automates code integration, testing, deployment, and monitoring processes. Through removing the human bottlenecks, CI/CD pipelines enable seamless software updates, which enables organizations to take their products to market speedily and securely with less risk. This paradigm increases the rate of development without compromising on the quality and stability of software by having an agile and resilient model of software delivery. Ultimate CI/CD Corporate DevOps Pipeline is a corporate-level pipeline with strong, scalable, and secure features that is built in accordance with the requirements of the corporate world. The pipeline takes care of recurring processes and maintains real-time feedback to provide enhanced quality in the release of software. The central parts of the project are containerization using Docker, orchestration using Kubernetes, and infrastructure management using Terraform. Together, these technologies create an extremely flexible and scalable solution with excellent operational efficiency. Further, the pipeline is created to easily integrate with well-known version control systems and Agile project management software, so the process is easy and team-friendly from coding to production deployment. This project specifically targets some of the most critical problems faced during software deployment, such as slow feedback loops, inefficiency in resources, and high error potential due to manual interventions. The project converts conventional software delivery into a lean, flexible, and future-proof pipeline through the application of DevOps principles and advanced automation technologies. This

Dear Sir,

Greetings!

I am delighted to extend a cordial invitation to you to grace the **Ad Mavericks: *Healthy Snacking for a Healthier Tomorrow*** **(Advertisement Making)** competition as an esteemed **judge**, which will be held as part of our international event, **The 20th World Unity and Peace Festival – CONFLUENCE 2025** scheduled for **18th August 2025** from **4:00 pm** at **City Montessori School, Kanpur Road Campus.**

This significant event organised by **City Montessori School, Indira Nagar I** will bring together individuals from diverse backgrounds to celebrate the power of harmony. The theme of this year's festival, **"Embracing Differences, Celebrating Oneness"**, aims to highlight the strength that comes from embracing our differences and working together for a common purpose.

We would be truly honoured to have you as a **Judge** for this special event. Your esteemed presence and valuable insights would add immense value to the competition and deeply inspire the young participants representing diverse cultures and perspectives.

Participants will be evaluated on the following parameters:

- Relevance to the theme
- Aesthetics
- Information on product
- Creativity
- Originality

We would be delighted to arrange conveyance for your comfort and convenience.

We sincerely hope you will accept our invitation and look forward to your affirmative response.

Warm Regards,
Ms. Kanika Kapoor
Principal & Convenor – CONFLUENCE 2025,
20th World Unity and World Peace Festival.

APPRECIATION OF FACULTY

Some of the faculties were appreciated for their tremendous work, outstanding performance and astonishing efforts towards the students' development, overall growth and beneficiary steps for the BBDITM Institution and its well-being. Below are the names of the faculties that were appreciated by our BBDITM Institution:-

- **Mr. Gyanendra Kumar (CSE)**
- **Mr. Deepak Pant (CSE)**
- **Mrs. Jyoti Gaur (CSE)**
- **Mr. Ashwani Pandey (CSE)**

STUDENT'S IN TECHNICAL EVENTS

Some of the students outshined and bagged specific participation and position in some of the respective technical events and brought happiness and pride to BBDITM institution. The name of the students are mentioned below:-

S.N	Name Of The Student	Name Of The Event	State /National/ International Level	Date Of Event	Name Of The Award If Any
1	UJJWAL KUSHWAHA	ERAKSHA - TECH AVISHKAR	National Level	17-Dec-2024	1ST POSITION
2	Shreyansh Srivastava	Attentrack	National Level	11-Mar-2024	1st Runner-up
3	Shreyansh Srivastava	Green Pioneer Hackathon	National Level	13-Jan-2025	1st Runner-up
4	UJJWAL KUSHWAHA	GDG LUCKNOW MEME WAR	State Level	17-Nov-2024	1ST POSITION
5	Manash Mishra	Meme war	State Level	11-Nov-2024	2nd position
6	UJJWAL KUSHWAHA	AKTU ZONALS ROBO SOCCER	State Level	30-Nov-2024	3RD POSITION
7	Mantasha	AKTU ZONALS	State Level	30-Nov-2024	3RD POSITION
8	Aditya kumar sonkar	AKTU ZONALS	State Level	30-Nov-2024	3RD POSITION

FACULTY DEVELOPMENT PROGRAMS

- **Dr. Sangeeta Mishra attended the FDP "The Digital Pulse: Exploring the core of Emerging Technologies" from July 14th – July 18th , 2025.**
  Organized by: *Department of Computer Science & Information Systems, Shri Ramswaroop Memorial University, Barabanki, Uttar Pradesh.*

- **Amit Kumar Sachan attended the FDP "Significance of Emerging Technologies and Intellectual Property Rights" from Dec 16 – Dec 20, 2024.**
  Organized by: *Mangalmay Institute of Management and Technology, Gr. Noida.*

- **Dr. Diwakar Yagyasen attended the FDP "Quantum Machine Learning: Bridging the Gap Between Quantum Computing and AI" from Jan 6th - Jan 11th , 2025.**
  Organized by: *AICTE Training and Learning (ATAL) Academy) at Raj Kumar Goel Institute of Technology.*

FACULTY DEVELOPMENT PROGRAMS

- **Mr. Deepak Pant completed the FDP on "Data Science(ML & AI)" from Jan 27th - Feb 1st , 2025.**
  Organized by: *E & ICT Academy, IIT Kanpur.*

- **Richa Verma completed the FDP "ML with Python" (12 days).**
  Organized by: *E&ICT Academy, Kanpur.*

- **Ms. Priyanka Gupta attended the one week FDP on "Data Visualization with Power BI" from Jan 7th - Jan 11th , 2025.**
  Organized by: *Electronics & Communication Engineering and Electrical Engineering, Babu Banarasi Das Northern India Institute of Technology, Lucknow in association with "Learn & Build".*

- **Dr. Sangeeta Mishra attended the 5-day FDP "Building Web Development Solutions with Cloud Computing from Jan 27th - Jan 31st , 2025.**
  Organized by: *Next Gen Employability Program.*

FACULTY DEVELOPMENT PROGRAMS

- **Ms. Padmini Mishra participated in the FDP "Building Web Development Solutions with Cloud Computing" from Nov 4th - Nov 8th , 2024.**
  Organized by: *Next Gen Employability Program (Edunet AICTE).*

- **Archana Dwivedi participated in the FDP "Applied AI: Practical Implementations" from Nov 8th - Nov 22th , 2025.**
  Organized by: *Microsoft India, SAP India & AICTE, TechSaksham.*

- **Dipti Ranjan attended the FDP "MERN Stack Web Development", organized by TechSaksham Program from Nov 25th - Nov 29th , 2024.**
  Organized by: *Microsoft Edunet AICTE.*

- **Dr. Sangeeta Mishra attended the 5-day FDP "Building Web Development Solutions with Cloud Computing from Jan 27th - Jan 31st , 2025.**
  Organized by: *Next Gen Employability Program.*

Abstract
Deanonymization tools are designed to unmask hidden identities or reconstruct obscured information, often leveraging advanced data analysis techniques. These tools have applications across cybersecurity, digital forensics, and law enforcement. The goal of this study is to develop a deanonymization tool that leverages metadata analysis, pattern recognition, and machine learning algorithms to identify and correlate digital footprints left across diverse platforms. This tool targets scenarios involving anonymized communication, obfuscated data logs, and masked web interactions, aiming to reveal underlying identities without compromising ethical boundaries. This project explores the concept of deanonymization, a technique used to reveal the true identity of individuals or entities previously anonymized in data systems. In a college context, this topic is relevant due to the growing use of online systems for academic assessments, student interactions, and personal data storage. The project investigates the methods, tools, and challenges associated with deanonymization, particularly in relation to how data, once anonymized, can potentially be traced back to its source through advanced algorithms, metadata analysis, or pattern recognition. Our proposed tool employs multi-layered analysis, starting with metadata extraction from network packets, social media footprints, or anonymized datasets. By
correlating temporal, spatial, and contextual parameters, the system constructs potential user profiles. Next, machine learning models analyze behavioral patterns, leveraging clustering and classification algorithms to match anonymized entities with known datasets. The system also integrates Natural Language Processing (NLP) techniques for deanonymizing text-based communications, extracting linguistic traits that can link anonymous entities to real-world users. Ethical considerations and regulatory compliance are central to this project, ensuring the tool is used responsibly. Stringent safeguards are incorporated to prevent misuse, and its deployment is intended for authorized personnel in scenarios such as criminal investigations, fraud detection, and cyber threat mitigation. This deanonymization tool represents a significant step in advancing cybersecurity capabilities while emphasizing the balance between security needs and ethical considerations in the digital age.

1. Introduction
Cybersecurity in the dark web domain focuses on safeguarding users and systems operating in this concealed network. The dark web thrives on anonymity, offering privacy to users ranging from whistleblowers to cybercriminals. However, de-anonymity—the process of exposing hidden identities—poses a critical challenge. By exploiting vulnerabilities in networks, analyzing behavior, or correlating traffic, entities can trace users' real-world identities. This dual-edged capability aids law enforcement in combating illegal activities but raises ethical concerns for legitimate privacy focused users. Understanding de-anonymity is pivotal for balancing security and privacy in the ever-evolving dark web landscape.
The TOR (The Onion Router) network was designed to provide anonymity and privacy for users by routing traffic through a series of encrypted relays. This network is widely used for accessing "onion sites," which exist exclusively within the TOR ecosystem and are inaccessible via traditional search engines. These sites often serve as platforms for privacy-focused communications and activities. However, the promise of complete anonymity within TOR is not absolute. With advancements in technology and the evolving capabilities of adversaries, the de-anonymization of entities—whether individuals, organizations, or services—has become a critical topic in cybersecurity. ABSTRACT
The AI-Powered City Safety project leverages advanced technologies like Artificial Intelligence (AI), Machine Learning (ML), and Internet of Things (IoT) to address critical urban safety challenges. With rapid urbanization and increased population density, the project aims to develop predictive, preventive, and risk-reduction solutions for hazards such as fires and road accidents. By integrating state-of-the-art object detection models like YOLOv5 and YOLOv8 with OpenCV for real-time video analysis, the system achieves high accuracy in detecting and responding to potential threats. Key intervention areas include early fire detection, where YOLOv8 and OpenCV's preprocessing techniques ensure rapid identification of fire and smoke, and dynamic road accident prevention, where YOLOv5 and OpenCV track vehicle and pedestrian interactions to predict collisions. A user-friendly interface enables real-time alerts, incident visualization, and system control for emergency responders and urban authorities.
The proposed methodology focuses on scalable and adaptable system development, including environment setup, data preprocessing, model training, deployment, and continuous improvement through feedback and re-training. Results demonstrate high precision, recall, and low latency, validating the system's efficacy in urban safety management. This project provides a replicable framework for smart cities worldwide, contributing to safer, more sustainable urban environments.

I. INTRODUCTION
The AI-POWERED CITY SAFETY concept is an advanced approach that aims to improve the safety and resilience of towns and cities through the use of **Artificial Intelligence (AI)** and **Machine Learning (ML).** Safety in urban spaces is one of the major concerns and challenges of the present age due to the alarming versions of risk and danger that accompanies rapid urbanization and increased population concentrations. This project aims at offering universal solutions to these problems that are going to require the application of high technology in an effort to ensure that urban spaces become secure, sustainable, and habitable for all inhabitants. The project would develop and apply predictive, preventive, and risk-reduction models for any possible hazard in urban areas, using a number of AI and ML technologies backed by the powerful OpenCV, which is a free library for computer vision. With OpenCV, one will have all the tools available for image and video analysis, real-time object detection, motion tracking, and activity recognition. That is exactly what this project requires to make preprocessing and analysing the large quantities of visual data effective.

Fire Detection: Installation of early fire detection systems that employ the latest machine vision technologies, such as YOLOv8, in combination with OpenCV's preprocessing techniques to quickly evaluate fire risks. OpenCV supports critical operations such as contour detection, edge detection, and noise filtering to ensure accurate detection even in

Estimating Redshift from Galaxy Color Indices: Ridge Regression to Deep Neural Networks

Dhruv Saxena*, Syed Gufran hussain**, Kunal Singh***, Chitransh Anand Srivastava****

****

Abstract:

This paper explores the use of machine learning models for estimating galaxy redshift from photometric color features derived from Sloan Digital Sky Survey (SDSS) data. We implemented and compared three models: a simple Ridge Regression, a shallow neural network using basic color indices, and a deeper neural network with an expanded set of color combinations. While the Ridge model captured some linear trends, both neural networks performed noticeably better, with the deeper model achieving slightly higher accuracy. Although the models are relatively simple and trained on basic color inputs, the results suggest that redshift prediction using photometric data is feasible without complex preprocessing or massive datasets.

Keywords — redshift estimation, galaxy colors, SDSS, ridge regression, neural network, photometric features, machine learning, regression models.

****

I. INTRODUCTION

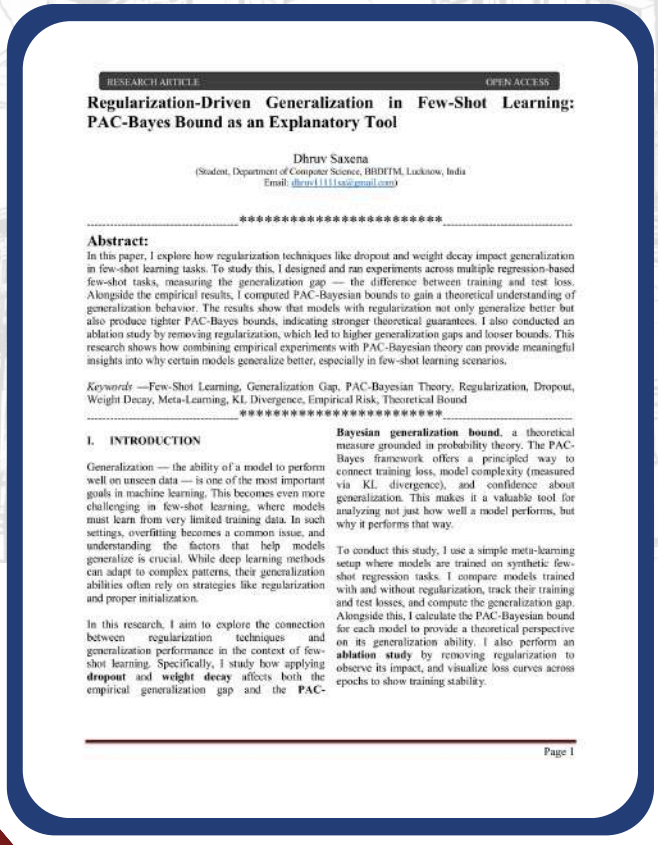

In cosmology, redshift is an important value that helps us understand how far away galaxies are and how the universe is expanding. Usually, redshift is measured using spectroscopy, which gives accurate results but takes a lot of time and effort. Since large sky surveys like the Sloan Digital Sky Survey (SDSS) collect huge amounts of photometric data (like galaxy brightness in different filters), it makes sense to explore whether we can predict redshift using just that.

We started with a basic question: **Can we use simple color differences between SDSS magnitudes to estimate redshift using machine learning?** This led us to try out a few models, starting from a standard Ridge Regression, moving on to a basic neural network, and finally building a deeper network with more color features. The goal wasn't to create a state-of-the-art system, but to see how much we could get out of these models using just the available color data.

This paper documents that process and compares how each of the three models performed on the task. The work is meant to be a straightforward exploration using standard tools, with an emphasis on simplicity and quick experimentation.

In astronomy, **redshift** is a key concept used to determine how far away a galaxy or celestial object is, and how fast it is moving away from us. The

Regularization-Driven Generalization in Few-Shot Learning: PAC-Bayes Bound as an Explanatory Tool

Dhruv Saxena
(Student, Department of Computer Science, BBDITM, Lucknow, India
Email: dhruv11111sa@gmail.com)

****

Abstract:
In this paper, I explore how regularization techniques like dropout and weight decay impact generalization in few-shot learning tasks. To study this, I designed and ran experiments across multiple regression-based few-shot tasks, measuring the generalization gap — the difference between training and test loss. Alongside the empirical results, I computed PAC-Bayesian bounds to gain a theoretical understanding of generalization behavior. The results show that models with regularization not only generalize better but also produce tighter PAC-Bayes bounds, indicating stronger theoretical guarantees. I also conducted an ablation study by removing regularization, which led to higher generalization gaps and looser bounds. This research shows how combining empirical experiments with PAC-Bayesian theory can provide meaningful insights into why certain models generalize better, especially in few-shot learning scenarios.

Keywords —Few-Shot Learning, Generalization Gap, PAC-Bayesian Theory, Regularization, Dropout, Weight Decay, Meta-Learning, KL Divergence, Empirical Risk, Theoretical Bound

****

I. INTRODUCTION

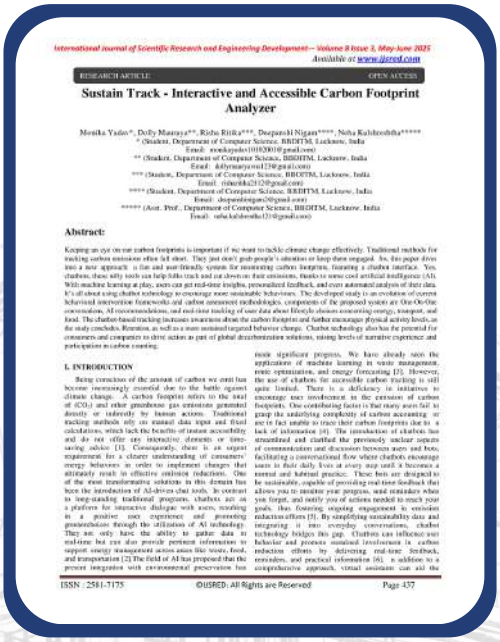

Generalization — the ability of a model to perform well on unseen data — is one of the most important goals in machine learning. This becomes even more challenging in few-shot learning, where models must learn from very limited training data. In such settings, overfitting becomes a common issue, and understanding the factors that help models generalize is crucial. While deep learning methods can adapt to complex patterns, their generalization abilities often rely on strategies like regularization and proper initialization.

In this research, I aim to explore the connection between regularization techniques and generalization performance in the context of few-shot learning. Specifically, I study how applying **dropout** and **weight decay** affects both the empirical generalization gap and the **PAC-Bayesian generalization bound**, a theoretical measure grounded in probability theory. The PAC-Bayes framework offers a principled way to connect training loss, model complexity (measured via KL divergence), and confidence about generalization. This makes it a valuable tool for analyzing not just how well a model performs, but why it performs that way.

To conduct this study, I use a simple meta-learning setup where models are trained on synthetic few-shot regression tasks. I compare models trained with and without regularization, track their training and test losses, and compute the generalization gap. Alongside this, I calculate the PAC-Bayesian bound for each model to provide a theoretical perspective on its generalization ability. I also perform an **ablation study** by removing regularization to observe its impact, and visualize loss curves across epochs to show training stability.

Abstract:

Keeping an eye on our carbon footprints is important if we want to tackle climate change effectively. Traditional methods for tracking carbon emissions often fall short. They just don't grab people's attention or keep them engaged. So, this paper dives into a new approach: a fun and user-friendly system for monitoring carbon footprints, featuring a chatbot interface. Yes, chatbots, those nifty tools can help folks track and cut down on their emissions, thanks to some cool artificial intelligence (AI). With machine learning at play, users can get real-time insights, personalized feedback, and even automated analysis of their data. It's all about using chatbot technology to encourage more sustainable behaviours. The developed study is an evolution of current behavioral intervention frameworks and carbon assessment methodologies, components of the proposed system are One-On-One conversations, AI recommendations, and real-time tracking of user data about lifestyle choices concerning energy, transport, and food. The chatbot-based tracking increases awareness about the carbon footprints and further encourages physical activity levels, as the study concludes. Retention, as well as a more sustained targeted behavior change. Chatbot technology also has the potential for consumers and companies to drive action as part of global decarbonization solutions, raising levels of narrative experience and participation in carbon counting.

I. INTRODUCTION

Being conscious of the amount of carbon we emit has become increasingly essential due to the battle against climate change. A carbon footprint refers to the total of CO_2 and other greenhouse gas emissions generated directly or indirectly by human actions. Traditional tracking methods rely on manual data input and fixed calculations, which lack the benefits of instant accessibility and do not offer any interactive elements or time-saving advice [1]. Consequently, there is an urgent requirement for a clearer understanding of consumers' energy behaviours in order to implement changes that ultimately result in effective emission reductions. One of the most transformative solutions in this domain has been the introduction of AI-driven chat tools. In contrast to long-standing traditional programs, chatbots act as a platform for interactive dialogue with users, resulting in a positive user experience and promoting greenerchoices through the utilization of AI technology. They not only have the ability to gather data in real-time but can also provide pertinent information to support energy management actions areas like waste, food, and transportation [2].The field of AI has proposed that the present integration with environmental preservation has made significant progress. We have already seen the applications of machine learning in waste management, route optimization, and energy forecasting [3]. However, the use of chatbots for accessible carbon tracking is still quite limited. There is a deficiency in initiatives to encourage user involvement in the emission of carbon footprints. One contributing factor is that many users fail to grasp the underlying complexity of carbon accounting or are in fact unable to trace their carbon footprints due to a lack of information [4]. The introduction of chatbots has streamlined and clarified the previously unclear aspects of communication and discussion between users and bots, facilitating a conversational flow where chatbots encourage users in their daily lives at every step until it becomes a normal and habitual practice. These bots are designed to be sustainable, capable of providing real-time feedback that allows you to monitor your progress, send reminders when you forget, and notify you of actions needed to reach your goals, thus fostering ongoing engagement to envision reduction efforts [5]. By simplifying sustainability data and integrating it into everyday conversations, chatbot technology bridges this gap. Chatbots can influence user behavior and promote sustained involvement in carbon reduction efforts by delivering real-time feedback, reminders, and practical information [6]. in addition to a comprehensive approach, virtual assistants can aid the

EduTest Portal Using Java with Spring Boot

Arun Sahni[1,*], Saumya Srivastava[2], Archana Dwivedi[3]

Abstract

The "EduTest Portal" is an innovative and comprehensive web-based platform developed to transform and modernize the traditional examination system. It utilizes modern technologies to provide a secure, efficient, and highly user-friendly environment for conducting online assessments. This platform is designed to overcome the common drawbacks of manual exam procedures, such as excessive paperwork, time consumption, human error in grading, and the high cost of administration. EduTest Portal offers a streamlined and automated process that benefits both educators and students by improving accuracy, transparency, and accessibility. Educational institutions can significantly reduce their administrative burden while also gaining access to useful performance analytics and real-time data for informed academic decision-making. The portal supports various question formats, user authentication, and timed assessments to maintain examination integrity. By promoting inclusivity and flexibility, it accommodates diverse learning needs and schedules. Overall, this project showcases the ability of EduTest Portal to revolutionize the assessment process and contribute meaningfully to the advancement of digital education.

Keywords: Digital Examination system, JAVA, MYSQL, Spring Boot, Database, REST API, Email Integration

INTRODUCTION

Traditional examination systems need professors to manually examine answer sheets, which is time-consuming and mistakes. The EduTest Portal System addresses these challenges by providing an efficient, web-based exam administration solution. This approach allows students to take exams online in a simple and quick manner, with results available soon after the exam is done. The system ensures that students can log in with a valid user ID and password and complete the exam within a set time frame. The EduTest Portal System automates several components of the test process, saving time and effort on human grading. It also gives greater security and transparency than older approaches. Students can examine their results and certificates immediately after submitting their answers. This project intends to improve examination processes for educational institutions such as schools, colleges, and universities. The platform is user-friendly for both students and professors, resulting in an efficient and secure testing process. The system is meant to be accessible from any place, which makes it a great alternative to modern schooling. There are several pages of questions in the EduTest Portal System, and students must either type their responses or choose the right answers by making the right selection. The primary goal of the EduTest Portal System's design was to cut down on the amount of time needed to administer student exams by hand. The goal of developing an EduTest Portal is to solve the problems with the current exam system and transform it. The system seeks to give students an effective, affordable, and easily accessible platform.

Additionally, the system seeks to offer flexibility in Exam scheduling, immediate student feedback, and effective administrator grading.

Dear Team *Squad 404(Group 4)*,

This is to inform you that after careful internal evaluation of all submitted entries for **Infosys Makeathon 6.0**, your team has been **officially shortlisted** to represent **Babu Banarasi Das Institute of Technology & Management, Lucknow**, for the next competition stage.

Please find the final details as submitted to Infosys:

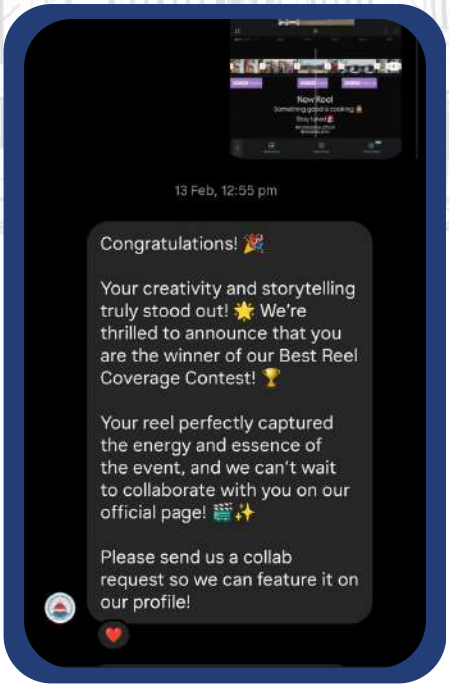

Team Name: Squad 404 (Group 4)
College Name: Babu Banarasi Das Institute of Technology & Management, Lucknow

Use Case: Smart Spaces Intelligent Energy Management System

Team Members:

1. **Ujjwal Kushwaha** – zbytes0@gmail.com | +91 [redacted]
2. **Manash Mishra** – manashmishra.soraon@gmail.com | +91 [redacted]
3. **Shikhar Srivastava** – srivastava.shikhar2709@gmail.com | +91 [redacted]

BBDITM

VIRTUAL MASTER CLASS
2024 - 25

- **Mr. Shubham Kumar Mishra was awarded for successfully completing the course "Introduction to Artificial Intelligence" on February 6th,2025 by *Infosys SpringBoard*.**
- **Mr. Shubham Kumar Mishra was awarded for successfully completing the course "Introduction to Deep Learning" on February 6th,2025 by *Infosys SpringBoard*.**
- **Mr. Shubham Kumar Mishra was awarded for successfully completing the course "Introduction to Data Science" on May 31st,2025 by *Infosys SpringBoard*.**
- **Mr. Shubham Kumar Mishra was awarded for successfully completing the course "Introduction to Natural Language Processing" on February 7th,2025 by *Infosys SpringBoard*.**
- **Mr. Shubham Kumar Mishra has successfully completed a 4-week course on Soft Skills Course Online-Complete Professional Development Training by *GeeksforGeeks*.**

VIRTUAL MASTER CLASS
2024 – 25

WHISPERING PAGES

- **The Algorithm of Life:**

In computer science, we believe every problem has a solution if not today, then after enough debugging. But what if life itself is just another algorithm?

We wake up, follow routines, make decisions based on conditions, and loop through habits. Some days feel like infinite loops, while others break us out with unexpected exceptions.

Unlike machines, though, we don't always get predictable outputs. And that's where life becomes more beautiful than code. There are no syntax errors in emotions, no compiler warnings for wrong decisions just experiences that shape our logic over time.

Maybe the goal isn't to optimize life like code, but to understand it like an evolving system learning, adapting, and sometimes, simply running without knowing the final output.

WHISPERING PAGES

- **Code and Chaos:**

In the world of programming, we often chase perfection. Clean syntax, optimized logic, and predictable outputs give us a sense of control like everything is exactly where it should be. But step outside the screen, and life refuses to follow the same rules.
Unlike code, life doesn't come with documentation. It throws unexpected errors, crashes without warning, and rarely offers a clear debugging guide. We make plans like structured functions, yet outcomes remain uncertain. And still, we continue looping through failures, learning from each breakdown, and rewriting parts of ourselves along the way.
What programming quietly teaches us, however, is resilience. Every bug fixed is a reminder that mistakes are not the end, but part of the process. Every failed run pushes us to think differently, to adapt, to improve.
Maybe life isn't meant to be perfectly coded. Maybe it's meant to be experienced messy, unpredictable, and beautifully unfinished. Because in the end, beyond logic and structure, the most meaningful creation we build isn't a program it's who we become while trying.

WHISPERING PAGES

- **"भारत का भविष्य":**

मैं भारत का चेहरा हूँ।
मैं तकनीकी दौर से गुजर रहा नव निर्माण का परिकल्पना हूँ।
मैं चलन युग की नींव में, नव पीढ़ी की सूरत हूँ।
मैं देख रहा जिस मंज़र को, एक नया भारत का चेहरा हूँ।
मैं सूरज सा तेज लेकर, मैं जल रहा प्रतीप हूँ।
मैं क्रांति बुद्धिमत्ता से लेकर, स्वच्छता का परिणाम हूँ।
मैं तकनीकी दौर से गुजर रहा, एक नये भारत का चेहरा हूँ।
मैं एक अंत से जन्मा,
नव युग का आरम्भ हूँ।
मैं अंधकार-उजाले समेत रहा,
नई दिशा के समंदर में,
भारतीय अखंडता का परिचय हूँ।
मेरे यश-गुण के जी रहो,
भारत का प्रत्येक वासी हूँ।
मैं तकनीकी दौर से गुजर रहा,
नव निर्माण की परिकल्पना हूँ।
मैं चलन युग की नींव में,
नव पीढ़ी की सूरत हूँ।
मैं देख रहा जिस मंज़र को,
एक नये भारत का चेहरा हूँ।
एक नये भारत का चेहरा हूँ॥

WHISPERING PAGES

- **"श्मशान":**

मेरे मन के भीतर, जब बढ़ गया अभिमान,
गलतफहमी दूर करने, मैं चला गया श्मशान,

न हवाओं में वो हिम्मत थी कि उन लपटों को बुझा सके,
न अपनों में वो ताकत थी कि अपनों को उठा सके,

सेठ भी झुलस गया पैसों के छलावों में,
बचपना भी न बच सका अंगारों की उन बाहों से,

न दौलत दिखी न खूबसूरती, राख के उस ढेर में,
सो गया वो व्यक्ति जो जागता हर सवेर में।
